company in Bangladesh*

MONSOON FOOD
& Beverage Ltd.

PRESENTS

Sucra Lose

natural sweetener

History behind Sucralose

Sucralose is an artificially sugar-taste-like zero calorie sweetener which was accidentally created and found in 1976. However, in 1991 it was first approved for use in Canada and is now widely used worldwide.

There are several kinds of sweeteners available in the market. That aside, a sweetener, which is 400times to 600times sweeter than sugar, it reduced the production costs of the products. Additionally, it cut off the downsides as bitter aftertaste of previously found sweetening agents like aspartame.

THE ULTIMATE SUGAR SUBSTITUTE FROM BANGLADESH

Why Sucralose is The Ultimate Sugar Substitute

Because of its sweetening compound, many researches has been done to find if it contains any adverse effect. Researches are still ongoing but the benefits of Sucralose has surpassed all. Besides that, Sucralose is the demand of the era.

All the imperfections of previous found sweeteners are absent in Sucralose and tastes just like sugar as the consumer desires with comparatively low cost.

As Sucralose simplifies other complications with satisfactory supply and demand as well as budget friendly reduced cost than any other sweetener available in the market, it has become the ultimate Substitute for any sweeteners.

Beverages

The superior quality of NutraSweet is the perfect sweetening agent for any kind of liquid drinks as Juices, instant, powder or energy drinks, carbonated soft drinks or even health or sports drinks.

Dairy

NutraSweet is the perfect replacement of sugar to use in dairy products. Moreover, adding NutraSweet to dairy products make it a better and healthier replacement and enhance the quality of the products. Ice cream, yogurt or flavored yogurt and all kinds of flavored milk can be produced with NutraSweet.

Bakery & Confectionary

Bakery and confectionary items are products we consume on a regular basis. To make it healthier and keep its sugar alike premium taste, NutraSweet is the best choice. On top of it, using NutraSweet can help reduce the cost tremendously.

Pharmaceuticals

Pharmaceutical industry is another biggest sector where sweetening agent is used in wide range. To maintain the top notch quality of the sweetening agents used in oral pharmaceutical suspensions, NutraSweet is the popular choice.

Jam-Jelly, Sauces & Syrups

As it goes, sweet additions in the bites bring the sweetness of life. A bit extra sweetness in the meals is always what exactly the consumer demands. To satisfy their preferences industries bring new addition to the foods almost every day. Spreads, Jam or Jelly, Sauces and syrups are such most demanding addition. To make it healthy and enjoy the sweetness carefree, NutraSweet is the most satisfactory choice among others.

Home Applications

Being Healthy and fit is the optimum desire for today's consumers. Many nutrition products these days are manufactured balancing the flavor and taste based on customers' preferences. Other than that, NutraSweet ensures to make everyday life a bit sweeter in daily food supplies as in tea or sweetening drinks like coffee.

THE ULTIMATE SUGAR SUBSTITUTE FROM BANGLADESH

NutraSweet is an artificially Natural-sugar-taste-like sweetener. It is Stevia basis made. Rebaudioside M found in Stevia leaf extract has drastically improved manufacturing scenarios for the food and beverage industries.

History Behind

NutraSweet

natural sweetener

Hundreds of years ago, Stevia Plant was found in South America. Later in 1970, Stevia plant extract was first commercially adopted to be used as a sweetening agent by Japan.

Over the course of time, it was introduced and adopted in many Countries for commercial usage. On one hand, Food and beverages industries continued to thrive while on the other, researches were going on to improve existent sweetener into more clear better and high purity sweetener out of stevia extract.

Stevioside, steviolbioside, rebaudiosides A, B, C, D, and E, and dulcoside A are the sweetening agents previously found in Stevia extract. However, to cut off the downsides (eg: bitter aftertaste) of previously found sweetening compounds, the continued research found Rebaudioside M, another sweet constituent in a very low concentration in stevia extract.

It is found that Rebaudioside M contains sugar-like-zero-calories sweetness without any health concerns corresponding with any other artificial sweeteners. The bitter aftertastes found in other sweetening compounds are totally absent in Reb M making it the ultimate ideal for any sweetening usage.

With the recent exploration of Reb M, Food and Beverage manufacturing industries developed drastically with effective health benefits that eradicates the imperfections of sugar or otherwise available artificial sweeteners in the market.

Why NutraSweet is The Ultimate Sugar Substitute

The only complication Rebaudioside M contains is its low concentration that makes it hard to meet the demand of the era.

Though Rebaudioside M purifies all the imperfections of previous found sweeteners and tastes just like sugar as the consumer desires, the limited availability of the product makes it expensive. As the price ticket gets higher and the supply gets limited, Rebaudioside M is more likely to be an over-priced fix for the ever-growing market.

NutraSweet Simplifies these complications with satisfactory supply and demand as well as budget friendly reduced cost than any other sweetener available in the market.

Create the Healthy Market for NutraSweet and Satisfy the Demands. NutraSweet Thrives for the betterment of the sweetening products to create health benefits and ensure availability. We are working hard to ensure everyone can eat sweet products without any health concerns worldwide with minimum Cost.

Improved production for the growing market
An outstanding R&D Team with rapport
Consistency within the Organization with sustainable approach
